DENSE, UNIFORM BALES IN ANY CROP CONDITION

Start building dense, flawless round bales with the Case IH RB 4 Series Round Balers. They pack more of your valuable crop into a weather-resistant, edible package.

More tines grab more hay. The Case IH pickup gently gathers every bit of the crop you grow, saving nutrition-packed leaves. Its unique design allows the pickup to float over ground contours. And, it has more tines than ever before — from 72 tines on the RB444 to 128 tines on the wide-pickup-equipped RB564. Depending on the model, the pickups are 20 percent wider than the bale chamber. They pick up the widest windrows and eliminate the need for gathering wheels to fill the sides of the bale chamber for firm, square-shouldered bales. The wide pickups now feature longer, large-diameter augers that assure smooth crop flow in heavy conditions. All pickups are protected from overload with a slip or ratchet clutch.

Durable belts and rolls. The RB 4 Series uses the combined action of chevron pattern belts and sturdy all-steel rolls to form dense bales of excellent shape. The floor roll starts the process by moving crop from the pickup to the belts and into the core cavity. There, forming rolls help to curl the crop and quickly start an edible core in all crop conditions. The six chevron belts (eight on the RB554 and RB564) grip the crop and flex over the bale surface, providing 91 percent coverage of the bale to reduce losses. Heavy-duty 3-ply endless belts — standard on the RB454 Silage and Rotor Cutter versions; optional on the RB564 — eliminate lacing maintenance and provide longer life.

Customized bales. RB 4 Series balers help you custom-build the round bales you need for your operation. An adjustable hydraulic belt-tensioning system puts superior bale density control right at your fingertips. You can easily monitor bale density in the field by referring to the pressure gauge on the front of the baler. To adjust density pressure, simply turn the valve handle. You can also customize bale diameter as needed, thanks to the variable chamber.

Take control of your round baling operations. See your Case IH dealer for more details on RB 4 Series Round Balers.

With a Case IH RB 4 Series Round Baler, you roll your nutrient-rich crop into a dense, weather-resistant package. Standard bale ramps on all models roll the bale away from the baler so that you can close the tailgate without having to back up.
The RB 4 Series balers offer many standard features, including a continuous-run PTO so you don’t have to disengage the PTO to eject a bale. Other features include a wide pickup with gauge wheel, a full-bale alarm, a spring-loaded bale ramp, a tailgate latch indicator and a bale counter. A spring and hydraulics maintain bale density (the RB444 is spring only). It applies less pressure at the start of the bale and increased pressure with hydraulics as the bale gets larger for a dense, weather-resistant outer shell and a core that’s easy to shred or feed.

The pickup’s forward location allows you to see windrows feeding and the crop flowing evenly into the bale chamber. On some models, the pickup is 20 percent wider than the bale chamber. The low profile, positive feed action helps feed the corners of the bale chamber for tight square-shouldered bales. A convenient hand crank lets you raise the pickup for transport. All Case IH balers feature dual-cam track design for baling in tough conditions (excluding the RB444, which is single-cam).

You can adjust the pressure on the bale density system without tools, allowing you to build bales just the way you want them. The easy-to-read gauge on the front of the baler lets you monitor system pressure from your tractor seat. Bale density is controlled hydraulically with a self-contained system. Requiring little maintenance, this system eliminates problems that can be caused by dirty hydraulic fluid and complicated hydraulic valves.

BUILD BETTER BALES WITH IN-CAB GUIDANCE

RB 4 Series Round Balers are designed to make your job easier. Choose from the Electronic Auto-Controlled Twine/Mesh Wrap System or the Electric-Controlled Twine Wrap System. Both feature an easy-to-use, in-cab monitor that makes you more efficient in the field.

The electric controlled monitor uses visual bar graphs and audible signals to guide your driving pattern to produce uniform bales. It helps you make consistent, high-quality bales — no matter what the crop, no matter what the conditions.

Now that you’ve made the perfect round bale, you can rely on the dependable RB tying and wrapping systems to finish the job perfectly as well.

With the Electric-Controlled Twine Wrap System, the bale-shape sensor guides your driving patterns to feed windrows evenly. Bale shape bars and audible alarms indicate which side of the bale needs more crop.

The Electronic Auto-Controlled Twine/Mesh Wrap System allows you to control operations right from your tractor cab. With a few simple keystrokes, you can adjust bale size, change tying patterns, monitor your bale count and engage diagnostic functions.
PRECISE TYING AND WRAPPING

Consistent, automatic twine tying. The Electric-Controlled Twine Wrap System ensures consistent twine placement so your dense, high-quality bales stay that way. The programmable system automatically starts the twine wrapping process, so you don’t have to worry about activating or controlling the twine wrapping — unless you choose to.

Here’s how it works. A full-bale alarm alerts you to stop forward motion, and the tying cycle starts automatically. The twine arms follow one of four programmed twine-tie patterns.

Four models offer mesh/twine wrapping productivity. For a bale package that’s smooth and tight, end to end, choose the optional Electronic Auto-Controlled Twine/Mesh Wrap System available on the RB454 Silage, RB454 Rotor Cutter Silage, RB464, and RB564 models.

With a few simple keystrokes of the in-cab monitor, you can adjust bale size, change tying patterns, monitor your bale count and engage diagnostic functions. Plus, it lets you switch from twine to mesh wrap with the press of a button — without removing mesh or re-threading twine.

Mesh wrapping lets you retain more leaves, and provides excellent weather-resistance for reduced spoilage. And mesh wrapping requires fewer revolutions to complete the bale than twine tying, so you get out of the field faster.

The electronic auto-controlled monitor allows you to manually start the tying/wrapping cycle if necessary. The monitor also includes a tailgate latch indicator and a bale counter that provides daily and total bale counts.

Simple, reliable RB444 tying system. The RB444 ties 4’4” bales fast with an electric, single-arm twine system that applies two strands of twine at the same time. The twine guide is adjustable so you can change placement of twine on the ends of the bales. A full-bale light alerts you when it’s time to activate the twine arm.

For complete details and a demonstration, be sure to see your Case IH dealer.

Full-coverage, over-the-edge mesh wrapping system completely covers bales to retain more leaves and provide excellent weather resistance. The optional Electronic Auto-Controlled Twine/Mesh Wrap System allows you to change between twine and mesh wrap with the press of a button.

The twine boxes, mounted on each side of the baler, offer plenty of storage. All twine/mesh balers hold six balls of twine and two rolls of mesh. Optional twine boxes are available to hold up to maximum of 12 balls of twine.
Perfect for dry and high-moisture crops, the Case IH RB454 model is also available in either a Silage or Rotor Cutter Silage version to handle the challenging conditions of silage baling. Both units turn crops with up to 65 percent moisture content into palatable, high-protein round-bale silage, drastically reducing time spent waiting for drydown.

**Special features for added durability.**
The RB454 Silage and Rotor Cutter balers are designed to give you top performance in tough, high-moisture crop conditions. The dual-cam pickup features larger-diameter augers, an angled feeder floor and a heavy-duty frame to handle heavy, wet silage crops with ease. And, the heavy-duty feeder features two positions designed specifically for silage baling. Heavy-duty 3-ply chevron-patterned endless belts eliminate the need for lacings, which translates into better durability in wet, stemmy silage. A rubber backwrap roll prevents sticky crop buildup and eliminates the need for a scraper.

On the Rotor Cutter version, a large-diameter rotor located just behind the pickup teams with 15 stationary knives to cut crop as short as 2.6 inches. The result is higher-quality haylage, less wasted dry hay, and better bedding for animals. Cut haylage compacts into a more-dense bale for more complete fermentation. Shorter-cut dry hay helps reduce waste when feeding cattle in bunks. In a total mixed ration, cut hay saves a step for grinding and makes for easier mixing. And cut straw is more absorbent plus simplifies manure removal.

Learn more about how the RB454 Silage and Rotor Cutter balers can help you make palatable, high-protein round-bale silage. Visit your Case IH dealer today.

**Higher-quality haylage is what you get from the rotor and knife system on the Rotor Cutter baler. It cuts crop length into more compacted, dense bales with less air, which aids fermentation for better silage.**

**A rubber backwrap roll eliminates the need for a scraper by preventing wet, sticky material from building up on the belts when working in moist silage conditions.**
### MODEL | BALE SIZE | BALER PICKUP | BALE CHAMBER | BALE WRAPPING
--- | --- | --- | --- | ---
RB444 | Diameter: 2.5–4 ft. (0.76–1.2 m) Width: 3.9 ft. (1.2 m) Weight: 300–750 lbs. (136–340 kg) | Overall width: 5 ft. (1.5 m) Tine-to-tine width: 3.7 ft. (1.1 m) 72 tines on 4 bars, Single-cam track | 6 3-ply belts; 7 in. (18 cm) wide; 2 double extension spring assemblies | Single pivoting twine arm; two twine tubes; Electric actuation; Manual spacing control; 4-ball capacity

(18 cm) wide; 1 extension spring, 1 hydraulic cylinder | Dual twine arms; Electric actuation adjustable spacing control; 6-ball capacity
RB454 Silage | Diameter: 3–5 ft. (0.9–1.5 m) Width: 3.9 ft. (1.2 m) Weight: 550–1,800 lbs. (249–816 kg) | Overall width: 7 ft. (2.1 m) Tine-to-tine width: 5.9 ft. (1.8 m) 112 tines on 4 bars, Dual-cam track | 6 endless 3-ply belts; 7 in. (18 cm) wide; 1 extension spring, 1 hydraulic cylinder | Dual twine arms; Electric actuation adjustable spacing control; 6-ball capacity; Electric auto-controlled twine/mesh wrap with over-the-edge full-bale coverage mesh wrap
RB454 Rotor Cutter Silage | Diameter: 3–5 ft. (0.9–1.5 m) Width: 3.9 ft. (1.2 m) | Overall width: 7.8 ft. (2.4 m) Tine-to-tine width: 6.8 ft. (2.07 m) 128 tines on 4 bars | 6 endless 3-ply belts; 7 in. (18 cm) wide; 1 extension spring, 1 hydraulic cylinder | Dual twine arms; Electric actuation adjustable spacing control; 6-ball capacity; Electric controlled twine wrap
RB464 | Diameter: 3–6 ft. (0.9–1.8 m) Width: 3.9 ft. (1.2 m) Weight: 400–1,650 lbs. (181–748 kg) | Overall width: 6.4 ft. (1.9 m) Tine-to-tine width: 5 ft. (1.5 m) 5.9 ft. (1.8 m) 96 tines on 4 bars / 112 tines on 4 bars, Dual-cam track | 6 3-ply belts; 7 in. (18 cm) wide; 2 extension springs, 1 hydraulic cylinder | Dual twine arms; Electric actuation adjustable spacing control; 6-ball capacity; Electric controlled twine wrap
RB554 | Diameter: 3–5 ft. (0.9–1.5 m) Width: 5.1 ft. (1.6 m) Weight: 500–1,550 lbs. (227–703 kg) | Overall width: 7.4 ft. (2.2 m) Tine-to-tine width: 5 ft. (1.5 m) 144 tines on 6 bars, Dual-cam track | 8 3-ply belts; 7 in. (18 cm) wide; 1 extension spring, 1 hydraulic cylinder | Dual twine arms; Electric actuation adjustable spacing control; 6-ball capacity
RB564 | Diameter: 3–6 ft. (0.9–1.8 m) Width: 5.1 ft. (1.6 m) Weight: 500–2,200 lbs. (227–998 kg) | Overall width: 7.4 ft. (2.2 m) Tine-to-tine width: 5 ft. (1.5 m) 6.8 ft. (2.07 m) 144 tines on 6 bars / 128 tines on 4 bars, Dual-cam track | 8 3-ply belts; 7 in. (18 cm) wide; 2 extension springs, 2 hydraulic cylinders | Dual twine arms; Electric actuation adjustable spacing control; 6-ball capacity; Electric auto-controlled twine/mesh wrap with over-the-edge full-bale coverage mesh wrap

### MODEL | TIRES | REQUIREMENTS | STANDARD FEATURES | OPTIONAL FEATURES
--- | --- | --- | --- | ---
RB444 | 11Lx14, 6-ply | 540 rpm PTO Minimum: 40 PTO hp (30 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Transport lights; Highway transport chain | 6-bar conversion kit; Lacing cable kit; In-feed disc kit; Left-hand pickup wheel kit; Fire extinguisher; Control box mounting kit
RB454 | 31x13.5-15, 6-ply | 540 rpm PTO Minimum: 60 PTO hp (45 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Full bale alarm; Transport lights; Highway transport chain; External sealed bearings | Lacing cable kit; Serpentine roll scraper kit; Hydraulic pickup lift kit; Infeed disc kit; Green feed kit; External expeller roll kit; Front tire storage box kit; Chain oiler kit; Control box mounting kit; Fire extinguisher; Windrow gathering wheels
RB454 Silage | 31x13.5-15, 6-ply | 540 rpm PTO Minimum: 65 PTO hp (48 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Full bale alarm; Highway transport chain; Rubber backwrap roll assembly; Looped rolls with scraper; External sealed bearings; Adjustable clevis hitch; In-feed discs | External expeller roll kit; Front tire storage box kit; Hydraulic pickup lift; Fire extinguisher; Chain oiler kit; Control box mounting kit; Locking hitch pin kit
RB454 Rotor Cutter Silage | 480x45-17 | 540 rpm PTO Minimum: 100 hp (75 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Full bale alarm; Highway transport chain; Rubber backwrap roll assembly; Looped rolls with scraper; External sealed bearings; Adjustable clevis hitch; In-feed discs | External expeller roll kit; Fire extinguisher; Chain oiler kit; control box mounting kit; Locking hitch pin kit
RB464 | 31x13.5-15, 8-ply | 540 rpm PTO Minimum: 70 PTO hp (52 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Full bale alarm; Transport lights; Highway transport chain; External sealed bearings; Adjustable clevis hitch | External expeller roll kit; Serpentine roll scraper kit; Front tire storage box kit; Hydraulic pickup lift; Windrow gathering wheels; Fire extinguisher; Chain oiler kit; Control box mounting kit; Apron declutch kit; Locking hitch pin kit; Hydraulic bale push ramp
RB554 | 14Lx16.1, 8-ply | 540 rpm PTO Minimum: 70 PTO hp (52 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Full bale alarm; Transport lights; Highway transport chain; In-feed discs | External expeller roll kit; Serpentine roll scraper kit; Front tire storage box kit; Hydraulic pickup lift; Windrow gathering wheels; Fire extinguisher; Chain oiler kit; Control box mounting kit; Apron declutch kit; Locking hitch pin kit
RB564 | 14Lx16.1, 8-ply 18Lx16.1SL, 10-ply | 540 or 1000 rpm PTO Minimum: 80 PTO hp (60 kW) | Bale-size indicator; Twine tube position indicator; Bale counter; Tailgate latch indicator; Full bale alarm; Apron declutch kit; Transport lights; Highway transport chain; in-feed discs | External expeller roll kit; Serpentine roll scraper kit; Front tire storage box kit; Hydraulic pickup lift; Windrow gathering wheels; Fire extinguisher; Chain oiler kit; Control box mounting kit; Double spring bale ramp kit; High moisture kit; Locking hitch pin kit; Hydraulic bale push ramp

INTRODUCING A MACHINE THAT MAKES SUPERIOR HAY BALEs, NOT EXCUSES.

When a window of opportunity opens up, you need to be ready with a machine that’s easy to hook up, operate, and maintain. Thanks to our engineers’ and designers’ tireless efforts, the new RB455A Round Baler comes to you with these efficiencies already built in. From the greater visibility provided by the forward position of the pickup to the superior bale chamber design, the new RB455A Round Baler is ready to roll when you are.

BE READY.

PERFORMANCE

The RB455A baler’s crop pickup is positioned in front of the bale chamber, creating a superior feed that not only allows you to pick up more material quickly, but also helps you achieve faster ground speeds. Plus, thanks to our innovative roll belt design, you’ll get dense, square-shouldered bales that are easier to stack.

RELIABILITY

The window for baling is narrow. The crop and weather conditions are just right and you need a baler that is too. That’s why the RB455A baler is engineered and assembled for reliable performance with features like shot-peened tines, a fixed row hitch for strength and durability, and a powered floor roll that supports the bale weight, giving belts longer life. Our simple and dependable roll and fence systems are designed to ensure uniform, high-quality bales no matter what the crop or conditions.

VALUE

Value is more than just a great machine at a good price. It’s how great a machine is able to continue to save you money and time long after you’ve left the dealership. The RB455A Round Baler is built tough to last season after season, it’s built smart to make it easy to maintain and operate, and it’s built right so it produces bale after bale of dense, high-quality hay.

A SMALLER ROUND BALER THAT ROLLS LIKE THE BIG BOYS

This baler packs a lot of value into a compact size and was developed to meet the needs of the rural lifestyle rancher or small farmer. It boasts the added features normally showcased on the larger RB Series balers, but is specifically designed for those demanding high-quality hay at a convenient low price.

HITCH AND HOOK UP

Hooking up this baler is simple and straightforward, thanks to a strong, durable, fixed-clevis hitch. The constant velocity driveline provides 60 degrees of free rotation between front and rear halves, creating a smooth power flow. The main drive is a 540 rpm PTO with shear bolt protection.

PICTUP

To allow for better visibility of the crop feed while operating, the RB455A pickup is positioned out in front of the bale chamber. The 4-bar, 72-tine pickup efficiently picks up the crop, providing more even feeding and faster baling speeds. To ensure greater durability and longer, trouble-free service life, all tines are shot-peened and the pickup is protected by a breakaway drive chain. Optional gathering and pickup wheels are available, as is the optional hydraulic pickup.

SERVICEABILITY

Case IH engineers have designed the new RB455A Round Baler to deliver hours and hours of productivity with even longer maintenance intervals. And when it is time for service, convenient features like large swing-open doors make access simple and ensure that service is quick and easy.
**RB455A BALE CHAMBER**

Well-formed, dense bales hold their shape, stand up to the weather better, and are easier to handle, transport and stack. Like all Case IH RB Series balers, the RB455A baler uses a combination of belts and rolls to form the bale. The benefit is clear: greater density bales without undue stress on the belts. This baler uses five powered rolls.

The rolls work together to maintain a smooth bale face and help reduce lumps and uneveness in finished bales. When it’s all said and done, the RB455A baler produces up to a 4x5 foot bale weighing as much as 1,000 lbs.

**UNIQUE CASE IH ROLLER SYSTEM**

- The powered floor roll supports the bale weight as it is being formed, alleviating undue stress on belts and eliminating the need for heavy-duty lacing
- The larger feeder opening allows for consistent crop flow into the chamber in almost any field condition.
- The starter roll begins forming the bale, working with the tails to grow the bale shape.
- The fixed roll is slotted and aids in core formation.
- The ribbed stripper roll works in tandem with the fixed roll to aggressively form and maintain bale shape.
- The bale density and shape sensing system utilizes two sensors mounted in the bale chamber on either side of the floor roll. During formation, the bale pushes directly against the two sensors as the bale is built. This system provides the most accurate method of sensing bale shape in the industry. It has been proven that round bales with dense sides stack better and remainstacked.

**STANDARD TWINE WRAPPING**

The RB455A comes standard with a single arm wrapping system with 4-ball capacity and standard control box.

Dual tubes tubes position tubes across the entire bale for reliable tying.

**OPTIONAL MESH WRAP**

To speed up baling, Case IH offers mesh wrap. The RB455A baler is capable of running "over-the-edge" mesh wrap which provides full bale coverage to retain more leaves and provide excellent weather resistance.

An optional storage compartment for a second roll of mesh wrap is located at the rear of the baler within easy reach. Like the RB 4 Series balers, both net and twine are front loading, providing a short path for optimum wrapping quality. A window allows you to see from the tractor cab that the bale is being wrapped properly.

**STANDARD CONTROL MONITOR**

The standard monitor features a full bale indicator alarm, automatic or manual bale wrapping modes, three preset wrap patterns (low, medium and high) and extend/retract control for manual net wrap or twine control.

**DELUXE CONTROL MONITOR**

The optional deluxe control system includes all the features of the standard monitor plus an LCD display for configuring a custom wrap pattern, and wrap adjustments and bale size control. Select from rice, canola or hay only deluxe monitor options.

**MORE BALER OPTIONS**

The RB455A can be customized for your specific operation with options like a bale ramp to eliminate the risk of closing the tailgate on the bale. Optional 31x13.5-15 flotation tires provide smoother baling in rough field conditions and reduce soil compaction.
### RB455A Utility Baler – Next Generation Variable Chamber Round Baler

#### Bale Size
- Bale Diameter/Width/Weight: 36 – 60 in. (915 – 1524 mm) / 46.5 in. (1182 mm) / 1,000 lbs. (454 kg)

#### Baler Dimensions and Weight
- Overall Length/Width (Gate Closed): 163 in. (4134 mm)/85 in. (2162 mm)
- Overall Height/Weight (Gate Closed): 100 in. (2534 mm)/3,460 lbs. (1569 kg)

#### Bale Forming
- Number of Forming Belts (All Chevron Design): 5
- Belt Width: 7 in. (178 mm)
- Belt Length: 343 in. (8712 mm)
- Total Number of Rolls: 14
- Tensioning Method: 1 Extension Spring, 1 Hydraulic Cylinder

#### Bale Ejector
- Bale Ramp: Optional

#### Standard Pick Up
- Feeder Type: Standard
- Overall Width: 62 in. (1554 mm)
- Width Between Outside Tines: 45 in. (1134 mm)
- Tine Spacing: 2.62 in. (67 mm)
- Number of Tine Bars: 4
- Number of Tines: 72
- Number of Windguard Fingers: 9
- Pickup Drive: Chain
- Pickup Drive Protection: Breakaway Chain
- Pickup Wheel: Optional

#### Wrapping System
- Twine System Type: Electric, Center Pivot, Single Arm with Dual Twine Tubes
- Twine System Control: Automatic, Electric
- Number of Twine Balls: 4
- Netwrap Option: Optional

#### Main Drive
- Standard Main Drive Protection: Shear Bolt
- PTO, Rated RPM: 540
- PTO Category Rating: 4

#### Tractor Requirement
- Minimum Tractor PTO: 40 hp (30 kW)
- Minimum Number of Hydraulic Remotes: 1 to 2

#### Monitoring
- Twine Wrap Monitor: Optional
- Net Wrap Monitor: Optional

#### Tire Size
- Standard Baler Tire Size: 11L - 154
- Optional Baler Tire Size: 31 x 13.5 - 15
